University of Colombo School of Computing (UCSC) - Sri Lanka

PROJECTS

- Emidwify

A Web-based project that mainly focuses to supervise and facilitate duties of midwives such as calculating needed vaccines amount, weight graphs, and report generation. Making midwife duties easy by accurately notifying and alerting the system.

Technologies: JavaEE / HTML / CSS / JavaScript/MySQL

- Vehicle Accident Identification and Alerting System

VAIAS is a web-based project with a mobile app.
Accident Identification is carried out by mobile app using the accelerometer of the mobile phone. It tracks the location and sends details to the relevant parties such as the nearest hospital, nearest police station, and family members.
By using web applications operators of the hospital and police station can view details and location of the accident. They can analyze data and generate reports.

Technologies: JavaEE, HTML, Bootstrap, Android, JavaScript

ACHIEVEMENTS

- Udemy Git Complete: The definitive, step-by-step guide to Git
- Udemy REST APIs using Spring Data REST.
- Udemy React - The Complete Guide (incl Hooks, React Router, Redux)
