## Work Experience

**Institute of Software Engineering**

### Software Engineering Student

- Engaged in a comprehensive software engineering curriculum, honing skills in various programming languages and development methodologies.
- Acquired theoretical knowledge and practical experience in software design, development, and testing.

**Institute of Software Engineering**

### Demonstrator :

- Demonstrated expertise in software engineering concepts and techniques to fellow students.
- Facilitated learning through practical demonstrations, tutoring sessions.
- Developed strong communication and mentoring skills while guiding peers through complex software engineering tasks.

## Education

**GDSE - Graduate Diploma in Software Engineering**

2022 - Present

**GCE Ordinary Level**

2007 - 2018

**G.C.E Advanced Level Examination (Technology Stream)**

2018-2021

## Skills

### Programming Languages

java / python /TypeScript/Javascript

### Database

MySql / Mongo DB

### Frameworks

- Spring / Spring Boot / Hybernate / Flask / Fast API / Express JS / Nest JS
- React JS / Angular JS / Next Js /

### OS

Mac / Linux / windows

## About Me

Motivated undergraduate software engineer with expertise in Java programming seeking opportunities to further develop skills and knowledge in web development. Committed to delivering high-quality, efficient, and user-friendly web applications. Additionally, I am a fast learner, eager to adapt and acquire new technologies and methodologies to enhance project outcomes and contribute effectively to team success.

# PROJECTS

## Pilisaru - Waste Management System

Associate with Pilisaru Organic Fertilizer Manufacturing Complex

- "Pilisaru" is a prize-winning waste management software created by Team Zyko.
- Team Zyko received the Best Teamwork Trophy at Innovesta 2023, an event hosted by IJSE.
- The software is named after the renowned Pilisaru Organic Fertilizer Manufacturing Complex in Sri Lanka.
- Pilisaru utilizes Java, JavaFX, MySQL, and CSS technologies.
- Its purpose is to improve waste collection, processing, and recycling, with a focus on sustainability.
- The team expresses gratitude to IJSE for the opportunity to showcase their teamwork and innovation.

## Chat App

Associate with IJSE

- Description: Designed and implemented a real-time chat system for Play Tech Pvt Ltd's customer service division.
- Achievements:
- Enabled instant messaging with support for text, Unicode, emojis, and images.
- Implemented robust user authentication and data encryption for security.
- Optimized the system for performance and scalability to accommodate future growth.
- Technologies: Network Programming, Java, Javafx, CSS
- Results: Improved team communication and collaboration within the customer service division.
-

## garage.lk - Online Garage and Vehicle Parts Service Platform

- Description: Developed and managed an all-in-one online platform catering to vehicle owners and garages, providing streamlined access to garage services and vehicle parts.

- For Vehicle Owners:

- Empowered vehicle owners to swiftly locate and connect with nearby garages offering repair and maintenance services through a comprehensive search and filter functionality.
- Facilitated easy procurement of genuine vehicle parts through an integrated marketplace, ensuring convenience and reliability.

- For Garages:

- Engineered a sophisticated garage management system allowing individual garages to subscribe and access specialized software for efficient client and employee management.
- Implemented subscription plans enabling garages to unlock premium features and enhance their service offerings, leading to increased operational efficiency and client satisfaction.
- Provided intuitive tools for garage owners to effortlessly manage clients, handle service requests, and oversee employee activities, optimizing overall business operations.

- Responsibilities:

- Spearheaded the development and deployment of the frontend and backend components using modern technologies such as React.js, TypeScript, Node.js, and MongoDB.
- Designed and implemented authentication and authorization mechanisms using JSON Web Tokens (JWT), ensuring secure access control for both vehicle owners and garage administrators.
- Collaborated closely with stakeholders to gather requirements, conceptualize features, and iterate on product enhancements, resulting in a user-centric and feature-rich platform.

## Drive Mate - Vehicle Rental System with Driver

- Description: Developed and managed an innovative vehicle rental system with driver, offering seamless booking services for clients and employment opportunities for drivers.

- For Clients:
- Provided clients with a user-friendly platform to effortlessly book vehicles with professional drivers for various purposes such as transportation, tours, and events.
- Implemented features for clients to send booking requests, create vehicle reservations, and track the status of their bookings in real-time for enhanced convenience and transparency.

- For Drivers:
- Established a registration system allowing drivers to join the platform and access job opportunities to work with the fleet of vehicles available.
- Empowered drivers to manage their profiles, view available bookings, and accept assignments, fostering flexibility and autonomy in their work arrangements.

- For Admins:
- Equipped administrators with tools to oversee and manage the platform, including the ability to review and approve or reject booking requests, monitor driver activities, and maintain the integrity of the system.
